Første møte med Djevelens høl

The author describes a trip to the cave "The devils hole", previously visited by foreign cavers. The cave was experienced as a very beautiful cave, with large passages in several directions and levels. The main passage was approximately 600-800 metres with a fall of 70-80 metres. Considering the dimensions of the cave and the content of different formations, the author can't understand the name Devils hole. On the same trip, they also found other caves near Devils hole.
