Test av prototypen til DistoX2

DistoX prototype X310 - testresults

A prototype of the card Beat Heeb wants to have installed in the X310 was tested in the summer and autumn 2013. We found a compass error, as we also did in our DISTOX's, but the error seems to be more systematic. The error depends on both the compass direction and roll. It is assumed that Norway's close location to the magnetic pole is the main error source.
